

My Wireless Battery Model MWB-1 User Manual
(available online at www.mywirelessbattery.com)
publication version 2018-042502

The **My Wireless Battery** model MWB-1 is a rechargeable portable battery pack that is capable of recharging most small wireless devices. The MWB-1 can be connected to your device using the included cable, and will also *wirelessly* recharge any Qi-capable device such as iPhone 6S and newer, and Samsung Galaxy S6 and newer models. A list of wireless-charging-compatible devices is available on our website, but it is by no means a complete list, as new devices with this capability are being added to the list all the time (if your device is Qi-capable and you do not see it on our list, please feel free to email us the brand and model of your device and we will add it to our published list of currently available Qi-capable devices).

Note: Wireless charging is slower and takes about twice as long to reach the same level of charge as recharging with the cable.

The MWB-1 will store enough charge to recharge most smartphones twice before the MWB-1 itself needs to be recharged. The battery pack will not recharge itself wirelessly, but must be plugged into any USB Type-A charging port using its included charging cable. The MWB-1 can also charge two devices simultaneously, either one wirelessly and one via cable, or by using two cables (2nd cable not included).

The MWB-1 has a tacky rubberized coating that is scratch-resistant, makes the battery pack easy to hold, and tends to prevent sliding on slick surfaces. The MWB-1 is equipped with 4 charging ports (2 of the USB Type A, 1 of the USB Type C, and 1 of the MicroUSB). The including charging cable can be used to recharge any compatible MicroUSB device by plugging the cable's other end into either of the MWB-1's two USB Type A ports. The same cable can be used to recharge the battery pack itself, by plugging the Micro-USB end of the cable into the matching port on the side of the MWB-1 and the cable's other end into any compatible USB Type A charger (such as the 110v charging adapter supplied with most smartphones).

The bottom of the battery pack is where all its ports are labeled. Please turn the battery pack over to confirm where all its charging ports are located and the type of each port.

OPERATION OF THE MWB-1

At the top left corner of the battery pack you will find a button and 4 white LED lights (on the edge of the battery pack). This button is the only control needed for operation of the MWB-1. To charge any compatible device with the MWB-1, first press the button to verify the battery pack is charged (when all 4 LEDs are lit, that indicates it has a full charge). To charge with the cable, simply plug the cable (or your compatible USB cable) into both the MWB-1 and your device. To charge wirelessly, place the MWB-1 on a flat surface with the labeled side down. Then place your Qi-capable device on top of the MWB-1, use your device's charging indicator to verify your device is charging, and leave it in that position until your device charges as much as necessary. You may need to reposition your device slightly to make sure the Qi inductive charging antennas on both the MWB-1 and your device are properly lined up. Once your device's battery indicator shows a full charge you may remove it from the MWB-1, since it will not charge your device any further at that point.

MWB-1 TECHNICAL SPECIFICATIONS

Maximum Charging/Storage Capacity: 8000 MaH
Ports: USB Type A (TWO), USB Type C (ONE), MicroUSB (ONE)
Dimensions: 5.75" long, 3" wide, 3/8" thick
Weight: About 7.25 oz.
